

The Fireball Evolution continues to be the bench-mark for all-round performance longboards.

The outline features a wide, stable nose for noseriding, and a pulled in 14" pin tail for smooth rail-to-rail transition. The bottom-shape features a proven combination of a single concave in the nose, a flat section through the center for paddle-power and stability, and a double concave tail, which directs waterflow and creates lift and drive.

The nose features bevels on either side of the concave, which helps stabilise the board when you're walking forward. The Fireball is the 'go-to' longboard for thousands of customers world-wide. It will take on bigger days with ease. It's a McTavish staple, and should be apart of any longboarders quiver.
